

Use your meter to check for water leaks

Water meters are generally located near a property's front boundary. They may be below ground level and covered with a metal or plastic lid. Please ensure that your water meter is free of obstructions such as overgrown bushes to allow easy access for reading and maintenance.

How to check for leaks:

1. Turn off all water appliances but leave the meter's stop tap on.
2. Read your water meter.
3. Make sure no water is used over the next hour.
4. Once the hour is up, read your meter again.
5. If the two readings aren't the same, you may have a leak. Call a licensed plumber to investigate.
