

## Pressure and Flow Information Request

This form must be used to apply for a water main pressure and flow test.

A plan confirming the preferred fire hydrant location on which the test is to be conducted must be forwarded with this application.

If the preferred location is unavailable, the nearest hydrant to that specified will be tested. More than one test location can be specified in this form, however each individual test location will incur a separate fee.

Wannon Water will provide you with a report with the hydrant flow and pressure field test results showing the pressure measured for each recorded flow rate.

In some cases not all of this information can be supplied for a particular testing site. We will try to provide as much information as possible.

Applicant details			
Business name:			
ABN:		ACN:	
If applicant is an individual person, please supply full name:			
Applicant name:			
Postal address:			
Business phone:		Mobile:	
Would you like the results report emailed to you?	Yes	No	

Test location	
Property details:	
Lot/Plan number:	
Street number:	
Street address:	
Town:	
Additional test location details (e.g., corner block, alternative street)	

<b>Payment details</b>	
<p>Payment may be made by cheque, credit card or EFTPOS.          The application fee is \$404 (GST exempt)  <i>Note: Your application will not be processed until we have received your payment.</i></p>	
<b>Acknowledgement:</b>	
<b>I understand and acknowledge that:</b>	
<ul style="list-style-type: none"> <li>• The information provided in this application is true and complete to the best of my knowledge.</li> <li>• Wannon Water may refuse this application if it becomes evident that any information or supporting documents provided is incomplete or false.</li> <li>• I approve of the information that has been provided in this application.</li> <li>• The pressure and flow test is not a compliance test for meeting the CFA's requirements for firefighting. The test only provides the flows measured from a fireplug and the residual pressure in Wannon Water's water main.</li> <li>• The head losses through the hydrant tee, riser and metering arrangement could be significant and the maximum flow rate measured does not represent the maximum flow available through a 100mm or 150mm dedicated branch.</li> </ul>	
By ticking this box, I confirm that I have read and understood all the statements above.
